Pinedale Anticline Project Office:

The panel review team reviewing the wildlife monitoring associated with mule deer on the Pinedale Anticline Project Area has completed its work. The panel consisted of PhD-level biologists with extensive research experience with mule deer, road disturbance, and statistical methods for monitoring wildlife; the final report represents a consensus view among the panel members.

I believe the panel has provided a very thorough review of the PAPA mule deer monitoring plan. I hope that you will find their comments and suggestions useful in improving the ability of the Pinedale Anticline Project Office to monitor mule deer populations while tracking their response to energy development.

If you have any additional questions regarding this peer review report, please do not hesitate to contact me if I can be of further assistance.

Sincerely,

Dr. Matthew J. Kauffman, Leader  
Wyoming Cooperative Fish and Wildlife Research Unit  
Department of Zoology and Physiology  
University of Wyoming
