Re: support for proposed route of
 segment 8,

To whom it may concern,

After further review I found that the section of segment 8 between Midway and Glenns Ferry (just north of Glenns Ferry) crosses additional land of concern. I misspoke in my previous email. I do support the proposed route from Glenns Ferry to Hemingway but I strongly feel that the alternate "8A" is a better route and I frankly do not understand why this is not the proposed route. Can you please provide any information/rational for choosing the route you have selected for the section of segment 8 I mentioned above.

Any information will be much appreciated.

Thank you,

Rollin
 Anderson

BLM

October 25, 2011

A quick review of the EIS and it's obvious, there is more information than individuals like us could properly process in the time allowed. This being the case, the following comments will be general in nature. I fully understand that the BLM is only interested in comments concerning BLM/Forest Service lands. In most instances, I have made no distinction between property owners of lands affected by these proposed power lines.

First of all I hope there has been an independent review of the need for this project...not from the corporate point of view but from what is in the best interest of the country as a whole. Is this needed and how well does it fit with all the power generation facilities needs? Does it improve the overall system reliability? I am really concerned this project is another billionaires' plan to gain advantage in this market. Could this be strictly a bottom line strategy with an end goal of higher electric prices?

I live in Glenrock and have saved all my life to buy our property there. Three of the four proposed routes cross the property my house sits on. One of them goes through my front yard...through the grass I mow every year, through the trees I planted almost 30 years ago, right in front of my picture window.

The E1 line is extremely unpopular here in Glenrock, as you probably already know. We don't have the lush trees and vegetation enjoyed by others to mask the looks of power poles. We truly value the look of our wide-open spaces. These lines are a huge distraction and really affect the quality of life. Placing this line right in the town's entrance really doesn't sit well. It has to be totally immoral to put this line through town. As small as Glenrock is, it wouldn't take much of an engineer to pick a better route.

This thing of needing 2-250kv lines leaving Windstar instead of 1-500kv just doesn't seem right. Looks like Warren's boys are trying to get a bunch of local collector lines installed as part of this project. Still if 2 lines are necessary, they should follow the same route, same towers...after all they go to the same place.

It looks like a route north of Glenrock for both lines would cause the least disruption and not come close to any houses. The land north of Glenrock certainly has less development potential. This is the route the Railroad and numerous pipeline companies have chosen simply because there is a large corridor with virtually no development. Grass doesn't even grow good through there.

My biggest gripe with this whole project is the way the power companies have gone about it from the inception. If I wanted to run a line from my house to my shop in Glenrock (4 miles), the first thing I would do is talk to the landowners in between...find out which ones are open to the idea and which ones would warm up for a price. I would then plan a route taking into account the landowner concerns as much as possible. It may be that some people would even want it on their property for the easement fees. This whole project is based around the ability of these companies to condemn a right of way.

They are planning a route that is most profitable to them, everyone else be damned... seems only obvious from the way they have conducted this project.

One thing I noticed is this line is going through the National Forrest in Idaho. Are you really sure you want to do this? Just seems wrong. I can't walk very far anymore, but I get out on public lands as much as I can...just love the open spaces. More and more I'm getting squeezed out of places I once went because so many roads are being closed. Now if I could walk in I would get to see power poles.

I do think it's great that you, or whoever, has kept portions of this line next to the interstate. I'm not real crazy about the section west of Jim Bridger. Some of that route is kind of barren ground but that's its appeal. Hopefully it follows an existing power line. I'm totally against scattering these lines all over the place. It seems like that's the power company's goal; no place without a pole.

My concern is there is no one to look out for the little guy concerning this project. The rocks and trees and fishes and jackrabbits have you guys to look after their interests; and you do a pretty good job at it, but there is really no one to look out for us small landowners. The politicians are so enamored with the thought of more taxes to spend that they can live with a few getting thrown under the bus. Even the President is all "gung ho" in helping out his old buddy and fast-tracked this project.

I know you are reading this just because you were told to and then will probably condense the context to a couple check boxes on a computer screen, maybe. I also know I probably sound like the old curmudgeon in the corner at the pool hall, but you are hearing the frustration us small landowners are feeling. I don't care to come off in such a negative manner but I have examined my premise and found no reason to change my opinions.

In closing I will leave you with a quote by James Madison: "The truth is all men having power ought to be mistrusted".

Comment:

I VERY MUCH FAVOR YOUR PROPOSED ROUTE
8 THROUGH THE BLM BIRDS OF PREY AREA.
THIS ROUTE WOULD HAVE THE LEAST IMPACT
ON THE MELBA AREA POPULATION + OTHERS
IN THE VICINITY. THE ALTERNATE
ROUTE 8 B WOULD BE IN A MUCH
MORE POPULOUS AREA, ONE SURE TO
GROW IN THE FUTURE. IT WOULD AFFECT
CURRENT & FUTURE PROPERTY OWNERS
LAND VALUATIONS.

Comment:

As a member of the Glenrock Town Council, I encourage you to find an alternative route for the transmission lines than to cross through the annexation area south of our town limits. I feel that the lines would be a hindrance to future development in this area.

Thank you.

Rosalie R. Goff.

Comment:

I am a fifth generation of the Curtis homestead trust located on 40 Mile Springs and am also an heir to land in the IE corridor. I want to express my support for 1E-C and opposition to 1E-A and 1E-B.

I support IE-C for the following reasons:

- Parallels 1W and stays in an existing corridor, not damaging additional land.
- Does not involve core sage grouse areas.
- Does not trespass on landowners who are not supportive of the transmission lines.
- I want our piece of land to remain untouched by the unpleasant city atmosphere. After all, this is why most of us reside in Wyoming.
- The power lines will forever change our unique landscape, family history, and property value.

I oppose 1E-A and 1E-B for the following reasons:

- ☒These corridors are within a very large elk migration route. If we disturb this historic pattern for the elk we will be damaging revenue for the state as licenses decrease.
- ☒The transmission lines are very ugly and will deter tourism in these areas.
- ☒The majority of landowners in these corridors strongly appose the development.
- ☒Building transmission lines through the mountains will be very costly, this is going to affect the already hurting Rocky Mountain Power customers.
- ☒We are in economic hardship and even if we do see revenue from this project it may be several years from now, possibly too late for some families.

This is not simply a comment or request, I am begging you; please help me stop 1E-A and 1E-B construction. It is crucial to me and my family that our heritage remains historic as it was when my great-grandfather worked this land. I look forward to not only telling my children past generation's stories but also allowing them to experience our property in its true beauty and rustic nature.

Comment:

I have spent the last seven years enjoying my wife's family's homestead land in the 40 Mile area and take pride that I now own a piece of it. This homestead has been in her family for five generations and it means the world not only to the Curtis heirs but also to me. We are now faced with our land being located in the proposed Gateway West 1E corridor. Like most landowners in this corridor, I would like to oppose 1E-A and 1E-B and support 1E-C.

I have hunted and fished in many places around Wyoming and believe that the Curtis Homestead is truly a piece of heaven. My time spent there has topped all of my other experiences in the great outdoors. Not only is it private with its non maintained roads, there is no cell service, electricity, or running water. I hope that someday our children can enjoy this private place like we have.

I fear that bringing power lines into our area is going to urbanize this land that we take so much pleasure in. Please help me by keeping future routes along existing routes (1E-A and 1E-B).

Although I am in favor of renewable energy, I question if mountainous areas are good location for the lines. You know as well as any Wyomingite, that we have harsh winters and many months out of the year the roads are drifted and muddy. The skinny Fort Fetterman road is very curvy and we have a very difficult time getting a cattle pot around the corners. I feel that in order to get their construction materials and equipment up to the location, they are going to have to build a road to make it easier on transportation to and from the work site. I dread that they will forever change the great historic significance that this area provides to Wyoming and our residents. If you would like to reach me, my phone number is 307-851-1373.

Comment:

I feel that because these transmission lines are to be used by the public the lines should be on public land. I feel that the State line route will be best with the least impact to private lands or citizens.

Due to health concerns State line which is away from the majority of people would be best.

State line will impact the least interaction with people, & not obstruct the views of a clean environment we currently enjoy here in Cassia county.

The least amount of impact on animals & equipment will be the State line route.

The corridor on state line will also create a natural fire barrier in case of range fires in that part of the region, thus helping BLM.

By locating on public lands fewer agencies or parties will be involved.

getting required right of way or easements

It makes more sense to take the state line route than to Rogerson where there is an existing substation that can be upgraded to heavier usage and ability to divert power south at that junction in the future.

The proposed corridors are already working with BLM through Wyoming so would already have the forms & paperwork required to cross that land and it could & should carry through Idaho on State line which is BLM managed public lands.

Soad

Of whom it may concern

As I have read and listened to the proposals of the power lines going through Cassia County.

I ^{hope} we need the electricity as the population continues to grow. Are we going to try to be united or Squabble like they have over the Windmills or the albion mountains.

I think having the power lines are going to ^{show} a far more effect in our economy in the long.

I don't know where it should go, but I believe that route should be where it has the least effect on prime farm ground, but not on a route that is going to cost millions should be constructed the power lines.

Subject: EIS comment form

I favor the existing right of way, due to the fact that the wild life are already used to the lines. The 4f1-4f2 and 4f5 is what I prefer. The 4d1 would go thru marsh areas and to close to the Hamms Fork river in that area also effecting the wintering of Deer, Elk and Moose. This is only less than 500 feet of the possible home site and the existing corrals and buildings.

BLM

I attended your meeting in Douglas concerning the Gateway West Transmission Line Project, and left with some serious concerns. After reading the headlines in the Casper Star Tribune, "Federal fast-tracking holds promise for Wyoming power lines", I have even more concerns.

At the meeting in Douglas, we were shown the two proposed routes through Glenrock (red lines on the map 1 of 74); 1W(a) north of town by the land fill, and 1E, south of town by I25. We were also shown other available routes; 1W(a)-A and 1E-A, bypassing Glenrock to the south adjacent to the existing power lines. These were shown as the green lines on the map 1 of 74.

Most of the information handed out at the meeting emphasizes the overall scope of the project and the town of Glenrock seemed to be just a speck on the map, without the resolution to examine either the proposed routes or the alternate routes. I understand the complexity of the project, and the desire to focus on the "big picture", but I have my focus on the local community and the long term affects of your proposals.

The people of Glenrock were initially told that the two options were either route 1E OR route 1W(a). This seemed to spark some controversy between Glenrock residents living on the north side of town versus those living on the south side of town. There are NO residents of Glenrock that want their property values affected by surrounding Glenrock with power lines used only to supply the west coast and Nevada with power.

I have contacted the local elected officials and were told that they were lead to believe that the transmission lines would be located next to the existing power lines far south of Glenrock. I was also told that no elected officials have been included in the selection of the various routes. This is very troubling that we as citizens have no input to the decisions affecting our future. When Rocky Mountain Power gets to choose a route that is cheapest, and the BLM is along for the ride to "grease the skids", I am shocked and appalled.

We have already had our electricity prices raised to support your current "infrastructure improvements", which you recently defined to mean that the residents of each state must share the costs of new power lines running through that state.

You are going to ruin our views of the mountains and the prairies, our property values, and then increase our electricity costs. Why?

You have other options:

- 1 - run the power lines through the unpopulated parts of Wyoming or next to existing power lines. This would save you money because you would't have to wast taxpayer money on all your studies. The studies were already performed for the existing power lines.
- 2 - run the power lines under the ground. They do that for natural gas and oil, why not electricity?
- 3 - comprise. If you still must run the power lines near a town, run that particular portion of the power lines near the town underground. You can run the rest of the power lines above ground between towns.

Comment:

Dear Sirs,

We appreciate the concern for future needs for electricity for the North West. We live on Twenty Mile Rd, Owyhee County, Grand View, ID. The way I understand, the south proposed route would go up Twenty Mile Rd. On the south side of the road we have a 1/4 mile pivot set up as a 1/2 swing with the pivot point backed up to the road. At the open house meeting in Murphy, ID in Sept. they told us on flat ground they span maybe 1200 feet between towers. The existing irrigation systems covers 2600 feet. They also said they dont jump back and forth across the road. Up the road on the north side a 1/4 mile my neighbors house is 150 to 200 ft from the road. At the meeting they said they usually try to stay away from existing

residences about 500 feet. So I asked them at the meeting if they realize this. No 1) the south side of the road they can't span 2600 ft. No 2) the north side of the road, my neighbors house is next to the road. Then you go up the road another 1/2 mile, I have a neighbors house 50 to 100 ft on the south side with a shop on the North side. (map included). The representative at the meeting said the aerial photos don't show all those details. We would appreciate if someone in person would come out and look over this situation and give consideration. We feel the BLM and State Ground is owned by the people, and it would be better to use one of the "Feasible Alternatives".

As much as we love the outdoors, the wildlife and wanting to keep that in a proper balance so they can continue to thrive, we feel more consideration needs to be given on how the South proposed route will impact us as humans.

Thank you,

Stuart J. Minger

Subject

Gateway West Project

To Whom it May concern:

This project is very concerning to me. You may think that putting power lines on this property is nothing as all that is there is land, but your wrong.

This is a place of beauty and the place I grew up. This property is were I come home to have family time with my 7 sisters and brothers and their children. This is a place of serenity and fun for us. We have so many family camping outings and good memories from our time together. Through out the year we get to gather for the holidays and have sledding, tubing and fishing horseback ridding and a lot of relaxation. We are able to do these things because my Dad, Calvin Barnes, was a hard worker and had a dream of owning a ranch and because of his hard work not to mention his blood sweat and tears into preserving a rancher's lifestyle for everyone to enjoy for generations.

I live in Denver and going to this family property is home and a place of beauty to me and my family. If the Power Lines are put up it will greatly impact the beauty and serenity this property has. I'm wondering if there will be any property left that can maintain its beauty with out man destroying it for selfish reasons, even Denver has places that are untouched and not destroyed to maintain wildlife and God's country.

I'm asking that you do not place the power lines on the Fontenelle place or the basin which is near Kemmerer for the sake of per serving it's beauty wildlife not only for me but for my daughter who will be and hirer to the property along with her and her 11 firsts cousins. I'm asking you to reconsider your plans and placement of the power lines that will greatly impact the beauty and the value of the place I call home.

I support only the 1E-C route! I really don't support any of this but since it has been crammed down our throats and approved let's ruin WY the least amount possible. And since CA has not even committed to buying our cheap wind electricity why should we suffer any more blight than we already will have from the turbines!

Comment:

Looking at the Route Detail Map 29 & 30 and using the Feasible Alternative Route going to the South of the Proposed Route from mile post 99 (which crosses an existing power line) to the Caribou-Targhee National Forrest Boundary at mile post 168. This Alterative Route would have less impact on the home owner residents of the Bear Lake Ranches by having the Gateway West Transmission Line to the south of the existing power lines. With this route there is also less transmission line that needs to be constructed which will cut down on the cost of this transmission line section (in the proposed route, there is a huge jog in the transmission line from mile post 100 to mile post 149 that goes north). Another benefit of having this transmission line running south of the existing line is that there is a lot less of tall vegetation (trees) that will have to be controlled in the future thus lowering the maintenance cost of this section. I hope that the Gateway West Transmission Line Project will check into this proposed alternative route and inform us of this proposed route.

Thank you

T. Blake + Jana Southwick

Mr. Walt George, BLM Project Manager
Gateway West Project
P.O. Box 20879
Cheyenne, WY 82003

Dear Mr. George,

I would like to voice my OPPOSITION to Segment 1W(a) of the proposed Gateway West transmission line project. I am a Converse County resident who is worried about the negative impacts this project will have on my property and this area if it proceeds as currently shown on the draft Environmental Impact Statement maps.

There can be no doubt that a major new overhead transmission line will decrease the value of my land and any land it crosses or abuts. Such transmission lines will also limit what we can do with our land in times to come. It will compromise wildlife and change the scenery forever.

There is an existing utility corridor that is the logical, sensible choice for siting new overhead transmission lines. I am FOR Alternative Segment 1W-A, which follows the utility corridor already in use.

Sincerely,

Tim Nelson

Comment:

I previously spoke with Dale Raugutt to microsite the line as noted below:

1. To avoid impacts to cabins move line along south edge of GISID #34. This will also avoid maple arch road used by professional photographer who is my wife.
2. Shift north onto parcel GISID #7426 because access to route must cross my property anyway.
3. Companies need to further discuss access related to locked gates with property owner.
4. Companies need to address weeds that may grow in right of way through discussions with property owner.

Cheyenne, WY 82003

To Whom It May Concern:

My name is Tom Crank and I live in Kemmerer, Wyoming. I have attended two BLM open houses and one Governor of Wyoming discussion meeting (Gov. David Freudenthal) concerning your EIS review of the Gateway West Transmission Line Project. I am concerned about the potential alignment of preferred Route Segment 4 in Lincoln County Wyoming. I am in favor of the project in general but feel the preferred route of Segment 4 is a travesty. The existing power line corridor identified as Segment 4A is in my opinion the most viable route.

The preferred route of Segment 4 will open up an area of land that is used by most of southwest Wyoming to recreate and enjoy its open views. The preferred Route of Segment 4 would cross over the top of Slate Creek Ridge and South Fork Mountain and be visible for over 50 miles as it does so. The area between the south end of Fontenelle Reservoir and the Fontenelle Basin (Fontenelle Basin being between Slate Creek Ridge and South Fork Mountain) is critical big game winter range and sage grouse habitat. The presence of this new power line corridor, into this yet uncut section of country, will increase the ease of access. Road construction (be it improved or two track) always follow these power line routes for maintenance. The actual construction may be by limited entry roads and helicopter sets, but access roads always develop under these power line corridors.

The section proposed to pass over South Fork Mountain West down into the Beaver Creek Drainage of the Hams Fork River is currently not accessible by motor vehicle and the presence of this power line corridor will greatly impact wildlife and recreation in this small canyon.

When I first saw what is now the proposed route of Segment 4, my reaction was someone needed to analyze a minimum number of possible routes and selected one that was obviously a poor choice. It would be easily discounted and one of the other routes would be selected. It has somehow developed into the proposed route for Segment 4. After attending two BLM meetings I STILL DO NOT

1/2

UNDERSTAND WHY. It has been suggested to me that the proposed or preferred route of Segment 4, has less impact to historic pioneer trails in the Kemmerer area than Segment 4A. The existing power line route, known as Segment 4A, is in my opinion is the most viable route. Segment 4A follows an existing power line corridor so wildlife impacts and historic trails issues are in my opinion minimal. The impacts to sage grouse and big game (wintering mule deer, antelope and elk) would be limited to the existing power line corridor using Segment 4A whereas proposed segment 4 would open up new impacts to all wildlife.

Recreationist following the historic pioneer trails near Kemmerer would not have any more view shed issues with the new power lines following Segment 4A. The proposed new route of Segment 4 would not remove the existing power lines of route Segment 4A and would add visual impacts to other pioneer trail segments north of the existing power line corridor. I do not believe the cultural impacts to views along pioneer trails are really of much value and should not carry much weight when reviewing these types of projects. The Oregon, California, and Mormon trails all came across Wyoming following the Platte and Sweetwater Rivers. When they reached the Green River they had to make a choice on how to get out of Wyoming before winter weather caught them in this higher country. The trails branch out all over the place. No proposed power line route will altogether miss these various branches of pioneer trails. The pioneer trails are much like the alternative routes of Segment 4 of this project. It comes straight west across Wyoming without much route variation but when it gets to Lincoln County, Wyoming you are now looking at several possible routes to try and avoid various environmental and cultural issues. The existing power line corridor along Segment 4A in my opinion is the best balance of all competing issues. It is also considerable shorter than the proposed route of Segment 4.

Since the construction of the existing power line corridor (Segment 4A) from the Jim Bridger Power plant in Sweetwater County, Wyoming some houses, and other structures have been built within view of the existing power line corridor. During this same time numerous summer cabins and out buildings have been built in the Commissary Ranches and Spring Canyon Ranch area subdivisions near the proposed route of Segment 4. My point is that people buildings near the existing power line corridor (Segment 4A) all knew they were building near the power lines and could see them. People building homes and cabins along the proposed route did not plan on the power lines in their back yards but it may now be forced on them and greatly reduce the value they have placed on their properties.

During the meeting in Kemmerer with then Governor Dave Freudenthal, the Governor came out with his support of Segment 4A rather than the proposed route of Segment 4. The Lincoln County, Wyoming, County Commissioners have also spoken out as to their opposition to proposed Segment 4. I greatly appreciate the positions these elected officials have taken concerning the segment of project as it will affect the local communities in Wyoming. Again I am adamantly opposed to the proposed alignment of Segment 4 as proposed and believe route 4A is the best balance.

Sincerely,

Tom Crank

To Whom It May Concern

I am writing this comment regarding the Gateway West Project. I am opposed to the selection of the Northern Alternative being considered in Segment 4 of the EIS.

The landscape close to your proposed Northern Alternative is rich in history, for instance, the Sublette Cutoff of the Oregon Trail, and many Native American sites and hunting areas. We have abundant wildlife, such as large populations of elk, mule deer, antelope and moose. It is an area of protection for these species—it has been designated Critical Big Game Winter Habitat, and is considered a Sage Grouse Core Area.

There beautiful ranches and homes in the path of your Northern Alternative. Not only will a transmission line destroy the magnificent, pristine views, it would wreak havoc on the economic, social, and environmental well-being of the area.

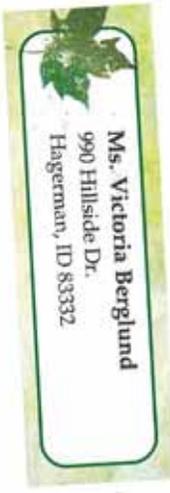

The existing transmission line has already been compromised, and it is unnecessary to do further damage to another area of Wyoming. I urge you to select one of your Feasible Alternatives and run the line parallel to it.

Thank you.

Sincerely,

Ty Hunt

Mr. George,

I am writing in support of the proposed Segment 8 and in absolute opposition to proposed 8 alt 8A.

The Hagerman Valley is a treasured location in South Central Idaho. We need to insure that this proposed route avoid the Hagerman area due to its natural beauty, national monuments, wildlife refuges, state parks. It would have a demonstrative affect on Public Access and recreation.

I moved to this valley due to my severe autoimmune diseases cured by the good air quality and clean water, my

Comments:

5C alternate route should be used as to avoid going by Arbon Valley elementary school. Even though it crosses the reservation and the Gateway owners will have to pay a yearly rental fee, so should it be for any private land owner they affect.

7H alternate will avoid going through the town of Rockland and the Eastfork recreational area. This also make a viable fit with Cassia County and avoids there irrigated lands.

Having witnessed 6 people killed because of crashes with power lines, I think it is important to stay away from farm land, powerlines and aircraft do not mix. 2 of the crashes were spray planes. 1 was a person aircraft, but the people are dead just the same. We need to have spray planes as a tool to farm with. Large power line need to be located away from farms fields!!!

Stray voltage from large power lines. I have felt static charges on wheel lines that are under 340KV lines. 500KV lines will put off more static. Boots and gloves are required when work on lines under these conditions.

GPS, who is to say what affect this does or will have on any future GPS equipment we that farm with now or in the futures. Technology has come along way and there is alot more to come. Do not hinder us because of stray voltage and magnetic fields. Precision farming is here and more to come.

Ref: Gateway West Project

To Whom it May Concern;

I am writing as a concerned citizen to express my concern and give my opinion regarding the recently issued Draft Environmental Impact Statement (DEIS) dealing with the Gateway West Project.

Within the past ten years I have spent considerable time in the Commissary Ranch area and have great respect for the overall beauty of the area and an even greater respect for those who have property and live there.

I have also spent time, on several occasions, fishing on Fontenelle Creek which would be directly under the proposed power lines. I consider this area very important for recreational purposes and running the power lines would lessen the enjoyment. The value of this type of recreation for the citizens can not be disregarded.

It is my opinion to build the power lines in the northern route in Section 4 would also do a great injustice to those who own property in the Commissary Ranch and Spring Canyon. I think it would be thoughtless to reduce the beauty of this area when there are already power lines going through to the south of this area. Why reduce the scenic beauty of the above mentioned areas?

I strongly urge you to deny the objections of the Fossil Butte and Oregon Trail representatives as much as I appreciate their concerns. The views in their areas of concern has already been degraded. Why degrade the views of other areas?

Wyoming is a beautiful state and I don't think ruining the views of other areas in a patchwork method (a power line here and another power line there) can really benefit the citizens of the state.

I sincerely request you reconsider your DEIS regarding the Gateway West Project and that you respect the concerns of the citizens of the Commissary Ridge area.

Sincerely,

WALTER E. SAVAGE

	use of 1000 south corridor	Subject

Dear Walt,

I am writing this in response to the conversation that we had in Almo with Todd Adams from the Idaho Power Company. I have prepared two maps of a route which is close to the original proposed route through Cassia County. The route uses The south side of 1000 South as the primary route. The proposal has been shown to Commissioner Dennis Crane, Representative Scott Bedke and Todd Adams. Each thought it had merit but should be held until after the draft EIS was released. In our discussion Todd said he would be willing to share the maps with you and I am willing to propose the plan publicly if and when needed. I believe the route is a good compromise and the most economical route. If you need more information please contact me anytime.

Thanks,
 Bill Loughmiller

RE: Gateway West EIS

This letter is in regard to the pending Gateway West Transmission Line and the editorial of the Times News dated October 18, 2011.

I believe the first paragraph should have stated that the 1,100 miles of power line does not go TO Wyoming and Idaho but originate at the fossil burning (coal) power plants in Wyoming and passes through Southern Idaho with a final possible destination of Las Vegas and Los Angeles. For those of us that live within a half mile of the existing Valmy Nev. to Jerome line, along the south hills, there are other major questions not yet answered. We know there is already another line permitted to parallel the Valmy line. The long range plan calls for at least 4 to 5 more lines to be built over the next 25 years as needed. We are not as concerned with the current Valmy line or the next line as we are that a POWER LINE CORRIDOR is being established as we continue to attend meeting after meeting.

I apologize to the government people that I got a little frustrated with during the recent meeting that was held for comments when the Bureau of Land Management representative said, "don't worry, after the first of the year we will start holding meetings in the communities to get input." I thought that is what is what we in the communities have been doing for the past 2 1/2 years.

I certainly commend and support Cassia and Power Counties for supporting their constituents . I would like to know where Twin Falls County stands on this issue. I have not found one effected landowner in Twin Falls County that supports this transmission line project.

Lets explore the big question. Do we need it? Probably not. With the wind farms and solar projects being proposed in Southern Idaho we may be able to produce our own green energy here at home. As we all know there is already a corridor of B.L.M, Forest Service and State land that is 29 miles wide and runs the length of Cassia and Twin Falls Counties. Let's use it. May be it is time the real stakeholders (the private land owners and affected parties) design our own concept of a transmission line corridor and submitted it to Gateway West and Idaho Power. Why do we always play "defense" when we should be able to play "offense" at some point?

Very truly yours,

William J. Brockman (Bill)

Comment:

I am writing to oppose "Segment 4 Proposed Route" north of Kemmerer, Wyoming. I think it would be better to keep the new transmission lines right along side the existing ones.

Keeping the lines together would minimize impact on the sage grouse population. Adding a new line elsewhere would have an adverse affect on a new range of the sage grouse. Now there would be two ~~ecosystems~~ ecosystems of the sage grouse impacted and not just one.

Adding "^{Segment} ~~Section~~ 4 Route" would not address protecting

the Sublette Cut Off of the Oregon Trail, which is well defined in the geography of the area. The Oregon Trail was already addressed in the existing route. ~~and~~ Opening up another portion of the Oregon Trail doesn't make any sense as far as preservation is concerned.

Segment 4 of the proposed route would put the transmission passing through some "wild and undeveloped" country. This area acts as the main ecosystem for deer, elk, moose, bear, and other populations of wildlife. It would affect the existence of such protected species as the lynx cat and wolverine. This area is also where migratory raptors are studied each year during the fall. I don't believe that the effects of this route have been completely addressed.

Putting the new lines next to the existing lines, it seems to me, would be beneficial from a business stand point also. Line inspection and maintenance would be more economical since they would all be together and not all over the country.

Privacy Note: Comments, including names and addresses of respondents, will be made available for public review after the close of the official comment period. Before including your address, phone number, email address or other personal identifying information with your comments, please be advised that your entire comment, including your personal identifying information, may be made publicly available at any time. Although you may ask the BLM in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so. All submissions from organizations and businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, will be available for public inspection in their entirety.

Please submit your comments by October 28, 2011. Information submitted on this form is being voluntarily provided solely for the purpose of commenting on the Gateway West Transmission Line Project.

Comment:

I am writing as a concerned citizen of Carbon County and the future generations of Fort Steele and the human and wildlife currently there.

I am in favor of the proposed "red route" on the project Overview Map figure A-1 and I am not in favor of 2A & 2B proposed route.

Sincerely, Windi Crago

This letter concerns the Idaho Power/Rocky Mountain Gateway West Project which intends (as their preferred route) to bring two 500 KV power lines from Wyoming down through the Rockland East Fork Canyon (Deep Creek Mountain Range) and the campgrounds at the head of that canyon. The lines would then intersect the Rockland Valley going both North-South and East-West. We the following persons strongly object to these routes and feel that because of their locations, size, and numbers, they will have an extremely detrimental environmental, economic and aesthetic impact on our community. We feel it is an unfair burden for the town and citizens of the Rockland area to bear. It will greatly affect the recreational value and experience of East Fork Canyon and the campground enjoyed by ourselves and others from all over this side of the state. It will impact the delicate spring area where Rock Creek begins, and adversely affect the large mule deer population that inhabits that area. It also goes over the main projected growth area for Rockland City, thus having an even greater economical and environmental impact for the community. There are problems with cultivating around the towers on some of the farm ground that would be in the route. Another concern is that this would make Rockland the route of choice for other large power line projects that are now in the planning stages.

Power County and several other cooperating counties have organized alternative routes that would place those lines in areas with less impact to the larger population, using existing power corridors, and less inhabited areas.

The signatures on the following petition will be sent to state legislators, congressional members, and BLM officials. We would appreciate your support in stopping the Rockland Valley from having this disparate transformation thrust upon them, especially when there are more viable alternatives available.

Thank you.

Subject

Gateway West transmission line

Dear Mr. George, attached you will find a letter with signatures of residents/property owners concerned with the segment between Glenrock and Rolling Hills labeled 1Wa in red on your map. Your consideration of our concerns will be greatly appreciated. Sincerely, Karen K. Worl, P. O. Box 621, Glenrock, Wy 82637(See attached file: Signed George Letter.pdf)

Mr. Walt George, Project Manager

Michael N. Takac
Land Services, Inc

Dear Sir;

We, the undersigned would like to express our deep concern and opposition to the proposed alternate site for the Gateway Transmission Line. This location is in very close proximity to many parcels of property that are currently inhabited by residents/ property owners, some of which who have been there for 30 years or more, or in several cases property that has been purchased for the express purpose of building homes on. The construction of this massive line would immediately impact the quality of life for these persons.

In addition to impacting the view, the devaluation of our properties would be significant not to mention the possibility of potential health hazards. In the case of the properties that were purchased for the purpose of building on, the line would be so adjacent to these properties as to make them basically worthless. We therefore humbly request that you use a route that won't so greatly impact the lives of persons living in the immediate area.

Sincerely,

A.P. Lot 62	<i>Steve Summers</i>	<i>Shelly Summers</i>	
	<i>Donald L. Jenkins</i>	<i>Patty Jenkins</i>	A.P. Lot 40
A.P. Lot 38+39	<i>Garen K. Wark</i>	<i>Michelle Wark</i>	A.P. Lot 60
Lot 1 RH #3	<i>Valley Q. Summers</i>	<i>Scott Wark</i>	
A.P. Lot 34	<i>David Dieck</i>	<i>Ronald Wark</i>	A.P. Lots 38+39
	<i>Jonnie Dieck</i>	<i>J. Wark</i>	
A.P. Lot 53	<i>Vernon Velasquez</i>	<i>Joanna House</i>	Lot 91 RH #3
A.P. Lot 63	<i>Wendy Velasquez</i>	<i>Scott House</i>	
	<i>Sheila Velasquez</i>	<i>Kimberly Cain</i>	116 Arrow Rd
A.P. Lot 61	<i>Tommy Stote</i>	<i>Mac Disney Griffiths</i>	111 Arrow Rd
A.P. Lot 36	<i>Melanie Jones</i>	<i>Keith W Griffiths</i>	111 Arrow Rd
50 Arrow Rd	<i>Brian Jones</i>	<i>Melanie Jones</i>	39 Arrow Rd
	<i>Scott Jones</i>	<i>Heath Jones</i>	39 Arrow Rd
		<i>Solomon Jones</i>	79 Arrow Rd
		<i>Dany Jones</i>	99 Arrow Rd

For the purpose of clarification, the specific portion of the route that we object to is the segment which runs between Glenrock and Rolling Hills and is labeled 1Wa (shown in red on the map).

Sincerely,
Garen K. Wark

To whom this may concern;

This letter is to "PROTEST" and "DISAGREE" with the

Gateway West Transmission Line Project, especially the

RED number four route. Starting at Montpelier Id through Lincoln County / Kemmerer area. In this area a transmission line will

"DESTROY" the beautification of, Beaver creek, Pole creek area of the Hams Fork along with Commissary Ridge and

South Fork Mountain areas going west to east across all mentioned. It directly affects the Spring Canyon Ranch area clear down to the Fontenelle Creek.

These all are important hunting, fishing and camping areas. It will affect the elk, deer, moose, bear, mountain lion, coyote, fox, badger, beaver, fish and fowl of all kinds. Effecting there crucial winter range and habitat.

Not to mention the ranches (Fontenelle creek) that has been in families for generations and to lose their pristine value due to the power line.

"Insist" you keep the transmission lines out of the wooded areas & river bottoms and go with the already existing route or the "GREEN" route (feasible alternative).

Sincerely: Zach Kilpack

To whom this may concern;

This letter is to "PROTEST" and "DISAGREE" with the

Gateway West Transmission Line Project, especially the

RED number four route. Starting at Montpelier Id. through Lincoln County / Kemmerer area. In this area a transmission line will

"DESTROY" the beautification of, Beaver creek, Pole creek area of the Hams Fork along with Commissary Ridge and

South Fork Mountain areas going west to east across all mentioned. It directly affects the Spring Canyon Ranch area clear down to the Fontenelle Creek & Ranches.

These all are important hunting, fishing and camping areas. It will affect the elk, deer, moose, bear, mountain lion, coyote, fox, badger, beaver, fish and fowl of all kinds. Effecting there crucial winter range and habitat.

Not to mention the ranches (Fontenelle creek) that has been in families for generations and to lose their pristine value due to the power line.

"Insist" you keep the transmission lines out of the wooded areas & river bottoms and go with the already existing route or the "GREEN" route (feasible alternative).

Sincerely: Veronica Endecott

To whom this may concern;

This letter is to "PROTEST" and "DISAGREE" with the

Gateway West Transmission Line Project, especially the

RED number four route. Starting at Montpelier Id. through Lincoln County / Kemmerer area. In this area a transmission line will

"DESTROY" the beautification of, Beaver creek, Pole creek area of the Hams Fork along with Commissary Ridge and

South Fork Mountain areas going west to east across all mentioned. It directly affects the Spring Canyon Ranch area clear down to the Fontenelle Creek & Ranches.

These all are important hunting, fishing and camping areas. It will affect the elk, deer, moose, bear, mountain lion, coyote, fox, badger, beaver, fish and fowl of all kinds. Effecting there crucial winter range and habitat.

Not to mention the ranches (Fontenelle creek) that has been in families for generations and to lose their pristine value due to the power line.

"Insist" you keep the transmission lines out of the wooded areas & river bottoms and go with the already existing route or the "GREEN" route (feasible alternative).

These all are important hunting, fishing and camping areas. It will affect the elk, deer, moose, bear, mountain lion, coyote, fox, badger, beaver, fish and fowl of all kinds. Effecting there crucial winter range and habitat.

Not to mention the ranches (Fontenelle creek) that has been in families for generations and to lose their pristine value due to the power line.

"Insist" you keep the transmission lines out of the wooded areas & river bottoms and go with the already existing route or the "GREEN" route (feasible alternative).

Sincerely: Frankie Nelson
