Dear Bureau of Land Management,

I only have a few main concerns regarding the NPL Project proposed by Encana and development of the 3500 wells on 140,000 acres. I think that a main concern should be air and water quality. Due to recent ozone levels in the town I think that air quality should be managed. Even though I personally felt no effect from the increase ozone levels, the older people in the community are definitely a priority. I also think that water quality needs to stay a main concern because water is used in many ways around the county. Another concern I have for the development of the wells is surface disturbance. The animals around the area are important to the lifestyle of people in this community. I don't necessarily think that nothing should be disturbed but I do think it should be managed so that none of the animals are harmed in a large way.

Thank you for your time.

Sincerely,  
 Ally Perry
